Please reject NAB's petition 04-160. I really enjoy our satellite radio. We travel alot and being able to get the weather and traffic for the cities that we are going through is very helpful. Trying to find that information on a local channel is very hard and most of the time the station has a lot of static on it. By the time it clears up, you are right in the middle of the traffic problem. with satellite radio, that is not a problem. My brother and brother-in-law are long-distance truck drivers and they depend on the information that they get from the weather and traffic stations to plan their routes. Please reject the petition. Thanks,  
Janice Connor
